

**PROJECT:** Governance and institutional Capacity Building Training

**YEAR:** 2012-13

**COUNTRY:** Somaliland

**CLIENT:** Terre Solidali Onlus

## DESCRIPTION

The third phase of the Project "Automation of Municipal Finance in Somali Municipalities" contributed to assist 14 of the main municipalities - as well as the Municipal Oversight departments of the Ministry of Interior and the Magistrate of Accounts (Somaliland and Puntland) - in their on-going efforts to introduce Automated Information & Financial Management Systems in the public sector.

In this framework, GISMAP provided support in the realization of a digital cadastre of Gebiley. The main activities were:

- Training activities on the use of the open source GIS platform gvSIG
- Design of the field data collection methodology using differential GPS
- Data import and editing into a GIS environment
- Development of an *ad-hoc* extension based on a portable version of gvSIG in order to facilitate the entire work-flow, from data collection to the production of maps, and organization of on-site sessions of on-the-job training to ensure full transfer of competence to the local partner.
